Üretim:

TT Çelikyay'ın üretim tesisi, 24 bin Ton/yıl kapasitesi ile Avrupa'nın en büyük üretim tesislerinden biri haline gelmiştir.

Üretimde Kullanılan Materyaller

Yaylık çelik lama 55Cr3, 51CrV4, 52CrMoV4 alaşımları şeklinde olup en iyi tedarikçilerden temin edilir.

Üretim Aralıkları

5-62 mm kalınlık

50-150 mm genişlik

Maksimum 2300 mm boya kadar üretim yapılabilmektedir.

Laboratuvar:

TT Çelikyay'ın modern donanımlı laboratuvarında, içyapı analizleri, mikro sertlik taramaları, ömür ve ön yükleme testleri ve boyutsal ölçümler gerçekleştirilir.

Ürünler:

Yaprak yaylar, süspansiyon parçası olarak, çok eski zamanlardan beri yaygın şekilde kullanılmaktadır. Dingili destekler ve süspansiyon aksamı olarak görev yaparlar. Helezon yayların aksine, yükü dingile eşit şekilde dağıtarak avantaj sağlarlar. Çok yakın bir zamana kadar otomobillerde de kullanılan yaprak yaylar, son dönemde ağır yük taşıyan ticari araçlar, çekiciler, kamyonetler, trenler ve arazi araçlarında kullanılmaktadır.

Konvansiyonel Yaprak Yaylar:

Kalınlığı tüm bölgesinde aynı olan yaylardır. Aşırı yükleme ve bozuk yol şartlarına uyum gösterirler. Boyları kademeli olarak değişen sabit kalınlıkta yay katlarının, merkez civatası ve kelepçe gibi bağlantı elemanları ile bir araya getirilmesiyle üretilirler.

Parabolik Yaylar:

Kesitleri parabolik olarak değişen yaylardır. Parabolik haddeleme işlemine tabii tutulmuş yay katlarının bağlantı elemanları ile bir araya getirilmesiyle oluşur. Esnek yük şartlarında konfor sağlarlar. Konvansiyonel yaylara göre daha düşük ağırlığa sahip olma avantajları vardır, çünkü daha az katla çalışma kapasitesine sahiptirler.

Hava Yastıklı Yaylar:

Parabolik kesitli yaylara "Z" şekli verilerek veya düz olarak üretilirler. Havalı süspansiyon uygulamaları için kullanılırlar.

Production:

TT Çelikyay has become one of the biggest productions facilities in Europe with a production capacity of 24 thousand tons per year.

Materials used in production

All raw materials used in production process as steel bars with grades 55Cr3, 51CrV4, 52CrMoV4 are supplied from the best suppliers.

Production capability for sections

5-62 mm thickness,

50-150 mm width

Maximum length of 2300 mm.

Laboratory:

TT Çelikyay has a modernly equipped laboratory for testing its products, therefore is able to make micro structure analysis, hardness control, pre-loading, cycle and dimensional tests.

Products:

Leaf springs are used widely as a part of suspension system for centuries. They support and hold the axle in position and unlike helical springs, they spread the load equally over the chassis of the motor vehicle. Leaf springs were also common on automobiles in the near past but today they are used in heavy commercial vehicles such as trucks, trailers, vans and railway carriages.

Multi-leaf springs:

Multi-leaf springs consist of several layers stacked on top of each other. In most cases the thickness of leaves are same but the length of layers get progressively shorter from main leaf to bottom. The complete sets are produced assembling the leaves with the help of parts such as bolts, bushes, clamps.

Parabolic leaf springs:

Parabolic leaf springs are modern variants of multi-leaf springs and consisted of fewer layers. On a parabolic spring leaf, the thickness varies from center to ends making a parabolic curve. Today parabolic springs are the most commonly used springs on commercial vehicles.

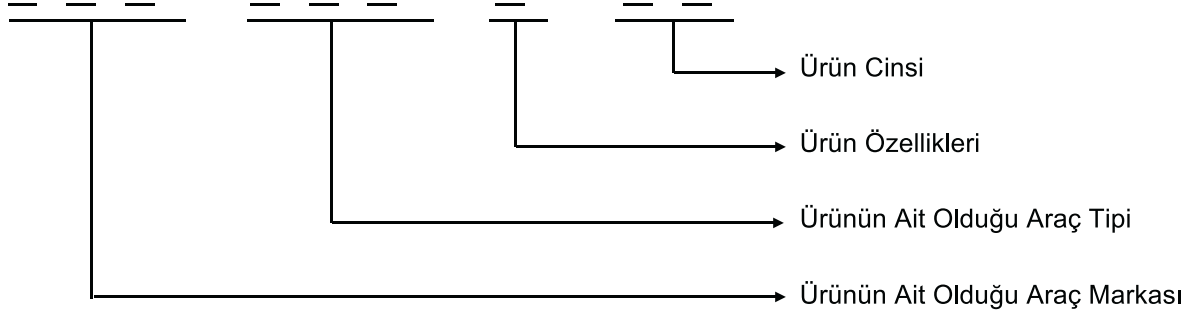

Beam springs:

These springs consist of one or two parabolic leaves and are used in air suspension applications.
